Intro to Frameworks & Libraries

Scenario 1 : For this project I would use React. React is appropriate for managing settings and displaying data about user activity and information, as well as displaying a lot of data. It is best suited to this project for its flexibility, scalability and performance.

Scenario 2: For this I would choose React. It would fit in with the different sub apps and will provide reliable performance and a ecosystem of tools for managing the data.

Scenario 3: For this project I would use VUE.js. It has a small footprint and is versatile for rendering HTML.

For MyFlixApp, React is the best choice for building the site due to its alignment for the current coding of the app as well as ability to handle constant updates for the user experience.
